Scoping

Solve For Good recruit individual research volunteers to respond to the problem with a set of solutions. Both discuss the achievability of solutions and usability for target user.

Feedback

After selecting a methodology the research team structured the project into stages, which became sprint goals. During the sprints, we organised feedback meetings with UNICEF to discuss progress toward the sprint goal.

Engagement

UNICEF engages with the Solve For Good research team. Both define the problem and the user of the intended solution together.

Methodology

After selecting the appropriate solution and the deliverable, Solve For Good research team draft a scientific methodology (see diagram x.)
